ANUJ NARAYAN BHATT

Ahmedabad, Gujarat, India | +91-7976462600 | anujnarayanbhatt@gmail.com | Portfolio | LinkedIn

PROFESSIONAL SUMMARY

Strategic Technical Lead and Systems Architect with 9+ years of experience engineering high-throughput, distributed backend systems across Fintech, Cybersecurity, and Enterprise sectors. Specialized in **Java**, **Spring Boot**, **Kafka**, **Zookeeper**, **AWS** and **Microservices architectures** with a strong focus on concurrency, multi-threading, database sharding, and horizontal scalability. Proven track record of leading core architectural transformations, reducing cloud operational overhead, and delivering enterprise-grade engines.

- *System Design & Architecture:* Deep expertise in Distributed Architectures, implementing concurrent payment scheduler, distributed locking, and event-driven processing to surpass traditional scaling limitations.
- *Technical Validation:* Demonstrated architectural and problem-solving expertise by successfully clearing the full technical selection process at **Google.**

TECHNICAL SKILLS

Languages & Frameworks:	Java, Kotlin, Python, Spring Boot, Microservices, REST APIs, ReactJS, Angular, JavaScript, TypeScript
Databases & Data Stores:	PostgreSQL, Oracle Database, PL/SQL, DynamoDB, Database Sharding
Cloud & Infrastructure:	AWS, Apache Kafka, Zookeeper, Docker, CI/CD, Maven, Gradle
Leadership & Execution:	Stakeholder Management, Technical Product Ownership, Cross-Functional Team Leadership, Agile Delivery

PROFESSIONAL EXPERIENCE

Technical Lead - Pirimid Fintech

04/2023 – Present *Ahmedabad, Gujarat*

- **Distributed Payment Scheduler:** Architected a high-concurrency recurring payment processing engine using Java, Spring Boot, and Apache Zookeeper for distributed locking, resolving horizontal scaling bottlenecks and reducing batch processing runtime from days to hours.
- **Automated Wealth Engine:** Directed full-stack engineering team building an automated wealth advisory and portfolio management platform using Java, Spring Boot, AWS, ReactJS, and TypeScript; integrated quadratic optimization algorithms for risk profiling, rebalancing, and automated trade execution.
- **Monolithic Modernization:** Leading multi-tenant microservices migration decomposing single-tenant legacy monoliths using the Strangler Fig pattern, while establishing domain squad models to support surging transactional volume.
- **Stakeholder Management:** Partnered directly with executive leadership and client C-suite stakeholders to align technical architecture with business roadmaps and exchange-level integrations.
- **AWS Resource & Cost Optimization:** Audited live AWS infrastructure, executing SQL query tuning, cache strategies, and database right-sizing to lower monthly cloud costs by $1,500 without sacrificing uptime or throughput.
- **Infrastructure & Observability:** Upgraded core production microservices to modern Spring Framework foundations and migrated frontend frameworks from UMI to Vite; established end-to-end distributed tracing across microservices, SNS/SQS, and Temporal workflows.
- **ONDC Network Integrations:** Architected backend and seller/buyer application components for India's ONDC framework using Java, WebSocket, ReactJS, and Spring Boot to ensure network compliance.

Senior Software Engineer - Musikaar

09/2021 – 04/2023 *Ahmedabad, Gujarat*

- **Microservices Orchestration:** Owned technical roadmap and delivery for the Exports & Data Integrations module across 10 distinct microservices, leading a cross-functional engineering team of 5 developers and QA engineers.
- **High-Throughput Engineering:** Designed concurrent job execution pipelines and secure data-sharing modules using Java, Kotlin, PostgreSQL, DynamoDB, and AWS for high-security enterprise cybersecurity datasets.

- **Rapid Leadership Growth:** Promoted from Backend Developer to Team Lead and Product Owner within a client in 12 months; partnered directly with client executive leadership to convert technical POCs into multi-year enterprise contracts.
- **Hiring & Operations Optimization:** Revamped internal technical evaluation workflows by introducing automated coding assessments, improving candidate quality while reducing senior interviewer overhead by 40%.

Senior Application Engineer - Oracle
06/2019 – 07/2021 *Gandhinagar, Gujarat*

- **Global Enterprise Utilities:** Engineered PL/SQL database cleanup utilities that were formally commended by Oracle's US Security Leadership and standardized globally across Oracle product maintenance operations.
- **Database Migration Leadership:** Led a 3-person engineering pod migrating 5+ enterprise customer environments from legacy systems to modernized relational database models with zero downtime.
- **Core Platform Engineering:** Maintained candidate portal micro-components for Oracle Recruiting (Oracle HCM) using Java and Oracle ADF, resolving critical client service requests and feature enhancements.

Software Engineer - Musikaar
06/2018 - 06/2019 *Ahmedabad, Gujarat*

- **Machine Learning Data Pipeline:** Developed an automated synthetic data generation framework in Python and Shell scripting to train CrowdStrike machine learning models, achieving a **4x improvement in model accuracy** and dramatically cutting false positive alerts.
- **Client Account Scaling:** Transformed a short-term POC into a multi-year, high-revenue engagement still active today; received formal **commendations from the client and the Musikaar CEO** for exceptional technical results.

Software Engineer – AppPerfect Corporations
04/2017 - 04/2018 *Udaipur, Rajasthan*

- **Multi-Threaded Engine:** Designed and built a multi-threaded data integration framework from scratch using Java with configurable JSON parsers.
- **Technical Vertical Expansion:** Pioneered the organization's Salesforce Integration vertical, earning two Salesforce certifications and architecting initial integration patterns to secure the company's first enterprise contracts.

ACHIEVEMENTS

- **Google Technical Selection:** Cleared full technical evaluation and system design interview rounds for Application Engineering at Google.
- **Global Enterprise Standardization:** Engineered PL/SQL database cleanup utilities officially commended by Oracle's US Security Head and adopted globally as the standard for secure data operations across Oracle products.
- **Infrastructure & Cost Optimization:** Audited live production microservices infrastructure on AWS, optimizing SQL queries, caching, and right-sizing databases to achieve $1,500/month in operational cloud savings.
- **Commercial & Account Growth:** Transformed short-term technical proof-of-concepts into multi-year, high-value contracts through high-impact system design execution.

EDUCATION

Bachelor of Engineering (B.E.) - Computer Science and Engineering
M.B.M. Engineering College, Jodhpur, Rajasthan

LANGUAGES

English
Full Professional Proficiency

Hindi
Native or Bilingual Proficiency
