ANUJ BHATT

Ahmedabad, Gujarat, India | +91-7976462600 | anujnarayanbhatt@gmail.com | Portfolio | LinkedIn

PROFESSIONAL SUMMARY

Strategic Technical Lead & Systems Architect with 9+ Years of Engineering Excellence**.** High-velocity Engineering Leader specializing in the design and delivery of highly scalable, distributed systems within the Fintech, Cybersecurity, and Enterprise sectors. Expert in **Java, Spring Boot, and AWS, Microservices** with a proven track record of architecting mission-critical Microservices that prioritize concurrency, data integrity, and horizontal scalability.

- **System Design & Architecture:** Deep expertise in Distributed Architectures, implementing concurrent payment scheduler, distributed locking, and event-driven processing to surpass traditional scaling limitations.
- **Technical Validation:** Demonstrated architectural and problem-solving expertise by successfully clearing the full technical selection process at **Google**.

SKILLS

Java	Kotlin	Python	Spring Boot	Microservices	AWS
Kafka	Zookeeper	REST API	WebSockets	PostgreSQL	Oracle Database
PL/SQL	DynamoDB	ReactJS	Angular	JavaScript	TypeScript
Docker	CI/CD	Maven	Gradle	System Design	Distributed Systems
Concurrency & Multithreading			Database Sharding	Event-Driven Architecture	
Technical Product Ownership			Cross-Functional Team Leadership		Stakeholder Management

WORK EXPERIENCE

Technical Lead

Pirimid Fintech

04/2023 – Present Ahmedabad, Gujarat

High-Scale System Architecture & Infrastructure Evolution

- **Distributed Payment Engine:** Architected a high-concurrency recurring payment scheduler using **Java**, **Spring Boot**, **and Zookeeper**-based distributed locking, overcoming horizontal scaling limitations and reducing processing times from days to hours.
- **Automated Wealth Advisory** Platform: Directed a 4-member full-stack team building an automated investment advisory engine using **Java**, **Spring Boot**, **AWS**, **React**, and **TypeScript**, incorporating a quadratic optimization algorithm for risk profiling, portfolio rebalancing, and automated trade scheduling.
- **Monolith Modernization:** Leading the decomposition of core monolithic applications into microservices utilizing the Strangler Fig pattern, while establishing self-sustaining domain squad models to support increased transaction volume.
- **Infrastructure Modernization & Observability:** Upgraded live **AWS** microservice infrastructure to modern Spring Boot frameworks and migrated frontend codebases from UMI to Vite to eliminate critical security vulnerabilities; integrated distributed tracing and observability across APIs, SNS/SQS messaging, and Temporal workflows.
- **E-Commerce/ONDC Network:** Directed development of buyer and seller apps for the ONDC network using **Java**, **Spring Boot**, **WebSocket**, and **ReactJS**, ensuring ONDC compliance and representing the company in network interactions.

Strategic Leadership & Business Impact

- **Product Roadmap & Stakeholder Partnership:** Elevated from a traditional technical lead to a core strategic stakeholder, partnering directly with C-suite executives and clients to author a 5-8 year organizational roadmap encompassing infrastructure migrations, processes and tooling evolution and exchange-level regulated market integrations.
- **Organizational Scaling & Operational Excellence:** Scaled the engineering unit from 2 to 4 high-performing developers with a roadmap toward cross-functional, self-sustaining domain squads, while embedding core platform capabilities in DevOps, integration, and operational support.

- **Business & Revenue Growth:** Directed a comprehensive AWS infrastructure audit, cutting cloud costs by $1,500/month through query optimization, resource tuning, and database downsizing without impacting system consistency.

Senior Software Engineer

Musikaar
09/2021 – 04/2023 Ahmedabad, Gujarat

Technical Product Ownership (Client: Tier-1 Cybersecurity Giant)

- **High-Throughput Engineering:** Designed and deployed concurrent job processors and secure data-sharing modules using Java, Kotlin, and AWS, ensuring top-tier security for sensitive cybersecurity data.
- **System Development:** Designed and implemented high-impact features using Java, Kotlin, and Microservices architecture, leveraging AWS cloud services, DynamoDB, and PostgreSQL. Ensured scalability and reliability through integration with Apache Kafka and Zookeeper.
- **Microservices Orchestration:** Owned the end-to-end roadmap and delivery for the Exports & Data Integrations module, managing a cross-functional team of 5 (Frontend, Backend, QA) across 10 distinct microservices.
- **Client Success:** Managed technical roadmaps and CSAT (Customer Satisfaction) initiatives, consistently meeting aggressive delivery timelines for complex, security-first feature sets.

Strategic Leadership & Revenue Generation

- **Rapid Career Trajectory:** Promoted from Backend Developer to **Team Lead** and ultimately **Product Owner** within a client (a global cybersecurity leader) within a year of joining, directly succeeding the Scrum Master in managing a 10-microservice portfolio.
- **Executive Partnership:** Hand-selected by the CEO to lead technical discovery and architect POCs for high-value prospects; successfully converted a major lead into a multi-year contract.
- **Organizational Scaling:** Overhauled the company's hiring workflow by implementing automated preliminary coding challenges, significantly reducing interviewer fatigue and increasing candidate quality.

Senior Application Engineer

Oracle
06/2019 – 07/2021 Gandhinagar, Gujarat

- Developed a suite of utilities as a sole project executor, including a **Java**-based UI generator for automated reporting and data extraction tools for issue tracking.
- Engineered **PL/SQL** Oracle database clean-up utilities that were personally commended by the Security Head of Oracle from US and officially adopted as the **global standard** for secure data operations across Oracle products.
- Led a team of 3 in seamlessly migrating 5+ customer environments from legacy systems to modernized database models, ensuring uninterrupted operations and enhanced performance while managing client expectations.
- Managed the candidate portal (Oracle Recruiting) of the **Oracle HCM** product (built on **Java** and **Oracle ADF**), overseeing feature developments, client service requests, and issue resolution.

Software Engineer

Musikaar
06/2018 – 06/2019 Ahmedabad, Gujarat

- **Algorithmic Impact (Client: CrowdStrike):** Developed an automated data generation framework using Python and Shell scripting to train machine learning models. Achieved a 4x increase in model accuracy, significantly reducing false positives for a Tier-1 cybersecurity giant.
- Transformed a short-term POC into a multi-year, high-revenue engagement still active today; received formal **commendations from the client and the Musikaar CEO** for exceptional technical results.

Software Engineer

AppPerfect Corporations
04/2017 – 04/2018 Udaipur, Rajasthan
Achievements/Tasks

- **Early Leadership:** Spearheaded the design and implementation of a robust Java-based backend framework from scratch, leading a team on a multi-threaded data integration system with a configurable JSON parser.
- **Market Expansion:** Pioneered the company's Salesforce Development vertical; achieved two levels of Salesforce Certification and architected the initial integration frameworks that allowed the firm to win its first Salesforce contracts.

EDUCATION

B.E. – Computer Science and Engineering (Honours)
M.B.M. Engineering College, Jodhpur
